

Collaboration Platform for Order Set Standardization, Management and Deployment

Zanett Healthcare's OrderPath™ is a Web-based collaboration platform for order set standardization, management and deployment that enables standardized, evidence-based order sets at the point of care. OrderPath™ enhances collaboration by guiding practitioners to a central repository to electronically share, manage and improve order sets. OrderPath™ ultimately provides your doctors and other clinicians with the critical information necessary to improve patient care and medication safety.

Benefits of OrderPath™

Improve Quality of Care and Patient Safety

OrderPath™ allows for the efficient use of evidence-based order sets designed to provide the best possible care with the latest available medical knowledge and medication choices with accurate dosages. In addition, OrderPath™ enables the standardization of order set content, leading to process improvement and higher quality of care.

Leverage OrderPath™ Before, During or After Your CPOE/EMR Implementation

Wherever you are in your Computerized Provider Order Entry (CPOE) or Electronic Medical Records (EMR) maturity, OrderPath™ can be quickly deployed to increase the speed and efficiency of your workflow. Prior to (or in parallel with) a CPOE/EMR deployment, OrderPath™ can be used as a catalyst to accelerate your path towards Meaningful Use goals. When used in combination with a mature CPOE/EMR system, OrderPath™ can help your organization increase user adoption, as well as improve and accelerate workflow.

Increase User Adoption of CPOE

Designed by clinicians, OrderPath™ features easy-to-use functionality which enables increased physician use of electronic order sets. OrderPath™ also effectively serves as an agent for change management required of significant exercises like CPOE and EMR implementations.

Improve Order Set Monitoring and Measurement

OrderPath™ offers the ability to audit which physicians are using the order sets, so targeted educational sessions could be directed to those not using the system. The solution enables easy, rapid feedback on order set usage by physicians through monitoring and reporting utilization metrics of specific items and order sets.

Benefit from a Cost-Effective Solution that Delivers Fast Time-to-Value

Unlike costly CPOE/EMR initiatives, OrderPath™ can be quickly deployed for a fraction of the cost to drive true efficiency and value in support of your Meaningful Use initiative. With a Software-as-a-Service (SaaS) option, your organization can avoid tapping shrinking capital budgets.

SOLUTION OVERVIEW

OrderPath™ allows you to leverage existing order set content into a central, Web-based repository of familiar order sets that will enhance collaboration, improve version control and improve patient care.

- ▶ **Accelerate:** Wherever you are in your CPOE/EMR maturity, OrderPath™ can be quickly deployed to increase the speed and efficiency of your workflow.
- ▶ **Collaborate:** OrderPath™ offers a single-point of entry for clinicians to access all of their documents and systems, and to electronically share, manage and improve these assets.
- ▶ **Standardize:** The OrderPath™ platform allows you to drive consensus on standardization of order sets and to maintain the production library.
- ▶ **Adoption:** Easy-to-use and designed by clinicians, OrderPath™ increases use of order sets, and effectively serves as a change management agent for new CPOE users.
- ▶ **Monitor and Measure:** OrderPath™ provides world-class, pre-delivered analytics and dashboards for monitoring and measuring real-time use of order sets and capturing feedback for continuous improvement.
- ▶ **Value:** OrderPath™ is a cost-effective solution for driving true efficiency and value in support of your Meaningful Use and improved quality outcomes for the patients you serve.

Features of OrderPath™

Web-based solution

OrderPath™ offers providers a Microsoft-powered, Web-based solution delivered via a portal to provide access to evidence-based clinical order sets and patient consent forms, and serves as an electronic storehouse and distribution system for each. Our solution eliminates paper-based order sets with poor version control and outdated information.

Order set standardization and consolidation

The OrderPath™ system allows for order sets to be published, accessed and updated electronically. This makes it easier to follow the latest national guidelines and local hospital formulary or policy changes. OrderPath™ provides a clean, easy-to-read, condensed version of only the selected items on the order set to be attached to the patient chart.

Order set review workflow

OrderPath™ allows physicians to streamline administration and tracking during order set development, as well as simplify the review process using customizable workflows.

Evidence-based guidelines

Evidence-based information is embedded into the order sets with links to the evidence, providing appropriate guidelines for orders on admission of patients and, thus, improving quality of care.

Reporting and auditing

OrderPath™ provides world-class, pre-delivered analytics and dashboards for monitoring and measuring real-time use of order sets and capturing feedback for continuous improvement.

Scalable and flexible

OrderPath™ is scalable and flexible enough not only to be managed centrally, but also to roll-out to additional locations as necessary. The solution integrates Patient Registration demographic information from ADT systems reducing the need for paper copies of order sets on the nursing units at multiple-hospital sites.

Quick deployment

OrderPath™ has been designed to be easily reproducible in different healthcare environments. The technology itself can be configured to the new environment and deployed rapidly with a minimum of changes. The user access portion is built to work with existing Microsoft Active Directory information – common to most healthcare provider organizations. As the end user need only an existing computer with Internet access and printing capabilities, this solution can be rapidly deployed in even small clinics and private practices while handling the back end work in a remote, central location.

Getting Started

To get started with the OrderPath™, we are pleased to offer you a **complimentary Order Set Standardization Workshop**. During this half-day workshop, our healthcare technology consultants will review the current use of your order sets, major processes, opportunity and pain areas, and short- and long-term needs. By determining the current state vs. desired state, we can then help you outline an improvement plan for the future from a healthcare information technology “best practices” approach.
